Customization

In addition to continually improving our OligoQHSE software, with the objective of improving your business, we also help developing and adjusting your system within your organization. Creating an effective risk management system for improved risk and QHSE performance is a challenge, so is keeping improvement continuous. Being able to systemize all your processes, generate statistics showing the important trends and share information requires a systematic approach. Our consultants typically assist with special reports, integration with other systems and scripting.

Consultancy services

Our experts are specialized in understanding your challenges and provide customer-specific packages in areas such as the following:

- Best practice and experience transfer within risk and QHSE operations
- Customized training – your needs, policies and rules combined with our domain expertise and tools
- Combined training within QHSE, incident investigation and risk management
- Best practices administration – lower your total cost of ownership
- Best practice monitoring – how to get the most out of your data
- In-depth studies, trending and analysis of your data-reporting on compliance – to meet your needs
- Quality control, verification and validation of your risk and QHSE data
